- Lazy Loading and Preloading
- Performance for Data Binding with OnPush
- AOT and Tree Shaking

Lazy Loading

Module Structure

Root Module

Feature Modules

Shared Module

Lazy Loading

Root Module

Feature Modules

Shared Module

Root Module with Lazy Loading

```
const APP_ROUTE_CONFIG: Routes = [  
  {  
    path: 'home',  
    component: HomeComponent  
  },  
  {  
    path: 'flights',  
    loadChildren: () => import('./flight-booking/flight-booking.module')  
      .then(m => m.FlightBookingModule)  
  }  
];
```

Routes for "lazy" Module

```
const FLIGHT_ROUTES = [  
  {  
    path: '',  
    component: FlightBookingComponent,  
    [...]  
  },  
  [...]  
]
```

Routes for "lazy" Module

```
const FLIGHT_ROUTES = [  
  {  
    path: 'subroute',  
    component: FlightBookingComponent,  
    [...]  
  },  
  [...]  
]
```

flight-booking/ subroute

Triggers Lazy Loading w/ loadChildren

DEMO

Lazy Loading

- Lazy Loading means: Loading it later
- Better startup performance
- Delay during execution for loading on demand

Preloading

Idea

- Module that might be needed later are loaded after the application started
- When module is needed it is available immediately

Activate Preloading

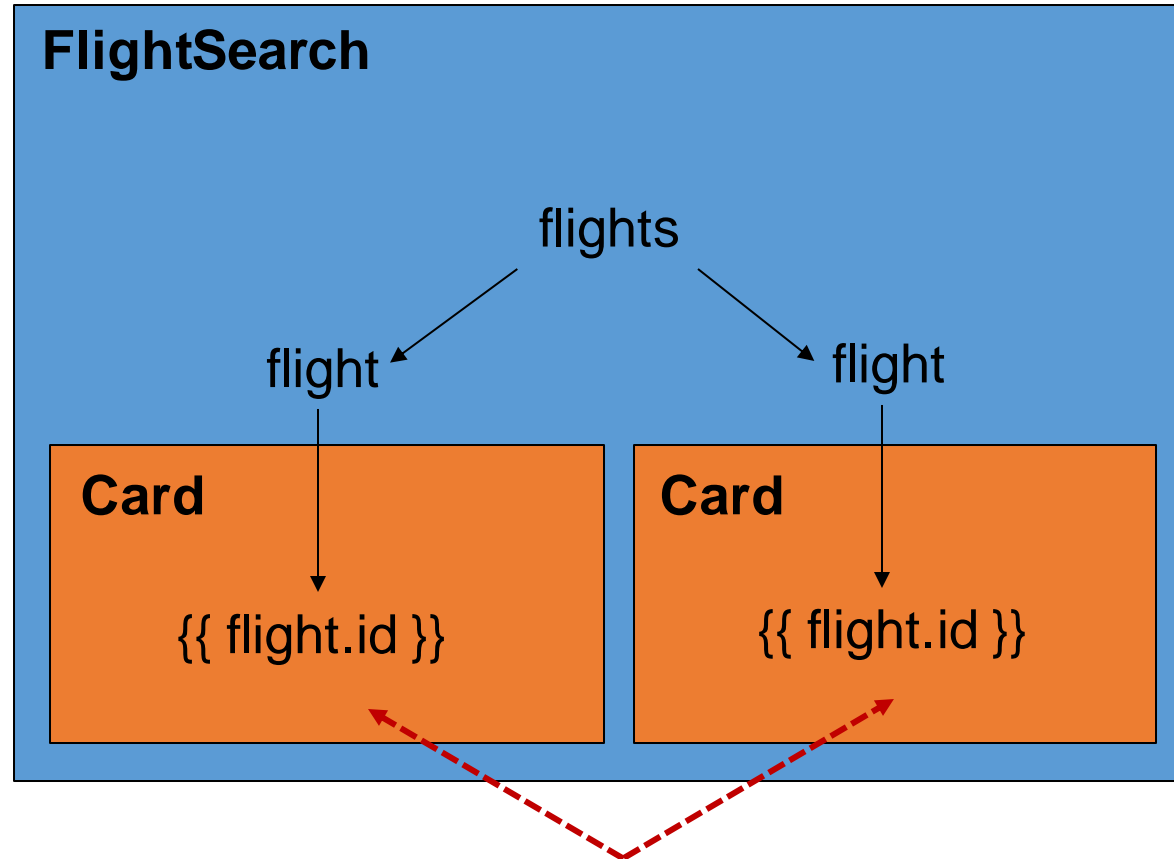

```
...
imports: [
  [...]
  RouterModule.forRoot(
    ROUTE_CONFIG,
    { preloadingStrategy: PreloadAllModules });
]
...
```

Performance-
Tuning with OnPush

DEMO

OnPush

Angular just checks when “notified”

"Notify" about change?

- Change bound data (@Input)
 - OnPush: Angular just compares the object reference!
 - e. g. `oldFlight === newFlight`
- Raise event within the component
- Notify a bound observable
 - `{{ flights$ | async }}`
- Trigger it manually
 - Don't do this at home ;-)
 - At least: Try to avoid this

Activate OnPush

```
@Component({  
    [...]  
    changeDetection: ChangeDetectionStrategy.OnPush  
})  
export class FlightCard {  
    [...]  
    @Input() flight;  
}
```

DEMO

Ahead of Time (AOT) Compilation

Angular Compiler

Approaches

- JIT: Just in Time, at runtime
- AOT: Ahead of Time, during build
 - Since Angular 9: Default (when using Ivy)

Advantages of AOT

- Better Startup-Performance
- Smaller Bundles: You don't need to include the compiler!
- Tools can easier analyse the code
 - Remove unneeded parts of frameworks
 - Tree Shaking

DEMO

Bundles without AOT and Tree Shaking
