# Angular Architektur-Workshop: Strategic Design and Micro Frontends

[ANGULARarchitects.io](https://ANGULARarchitects.io)

# Typical Module Structure

# Contents

- (npm-)Packages
- Nx Monorepos
- Strategic Design and DDD
- Microfrontends

npm Packages

# Create Library with CLI $\geq 6$

```
npm install -g @angular/cli
```

```
ng new lib-project
```

```
cd lib-project
```

```
ng generate library logger-lib
```

```
ng generate application playground-app
```

```
ng serve --project playground-app
```

```
ng build --project logger-lib
```

# Folder Structure

- ▶  node\_modules
- ◀  projects
  - ▶  logger-lib
  - ▶  playground-app
  - ▶  playground-app-e2e
  - ▶  ~~src~~
  -  angular.json
  -  package-lock.json
  -  package.json
  -  tsconfig.json
  -  tslint.json

# Create Library with CLI $\geq 6$

```
npm install -g @angular/cli
```

```
ng new lib-project --create-application false
```

```
cd lib-project
```

```
ng generate library logger-lib
```

```
ng generate application playground-app
```

```
ng serve --project playground-app
```

```
ng build --project logger-lib
```

Publishing

# Publishing to npm Registry

- Increment version in package.json
- ng build logger-lib --prod
- npm publish *dist/logger-lib* --registry <http://localhost:4873>
- npm install logger-lib --registry <http://localhost:4873>

# Alternatives for setting the Registry

- Global: npm set registry <http://localhost:4873>
  - Default: registry.npmjs.org
  - npm get registry
- Project: .npmrc in project root

```
registry=http://localhost:4873/
```

```
@my-company:registry=http://my-server:4873/
```

# npm Registries

Nexus

Artifactory

Team  
Foundation  
Server

Verdaccio

*npm i -g verdaccio  
verdaccio*

# DEMO

# Advantages

- Distribution
- Versioning

# Disadvantages

- Distribution
- Versioning

;-)

# Disadvantages

## Distribution

- Annoying within project
- Prevents gritting further libs

## Versioning

- Old versions
- Conflicts
- How to force devs to use latest version?

Monorepos

# Monorepo Structure

- ▶  node\_modules
- ◀  projects
  - ▶  flight-admin
  - ▶  flight-api
  - ▶  flight-app
  - ▶  validation
-  .gitignore
-  angular.json
-  package-lock.json
-  package.json

# Advantages

Everyone uses the latest versions

No version conflicts

No burden with distributing libs

Creating new libs: Adding folder

Experience: Successfully used at Google, Facebook, ...

# Two Flavors

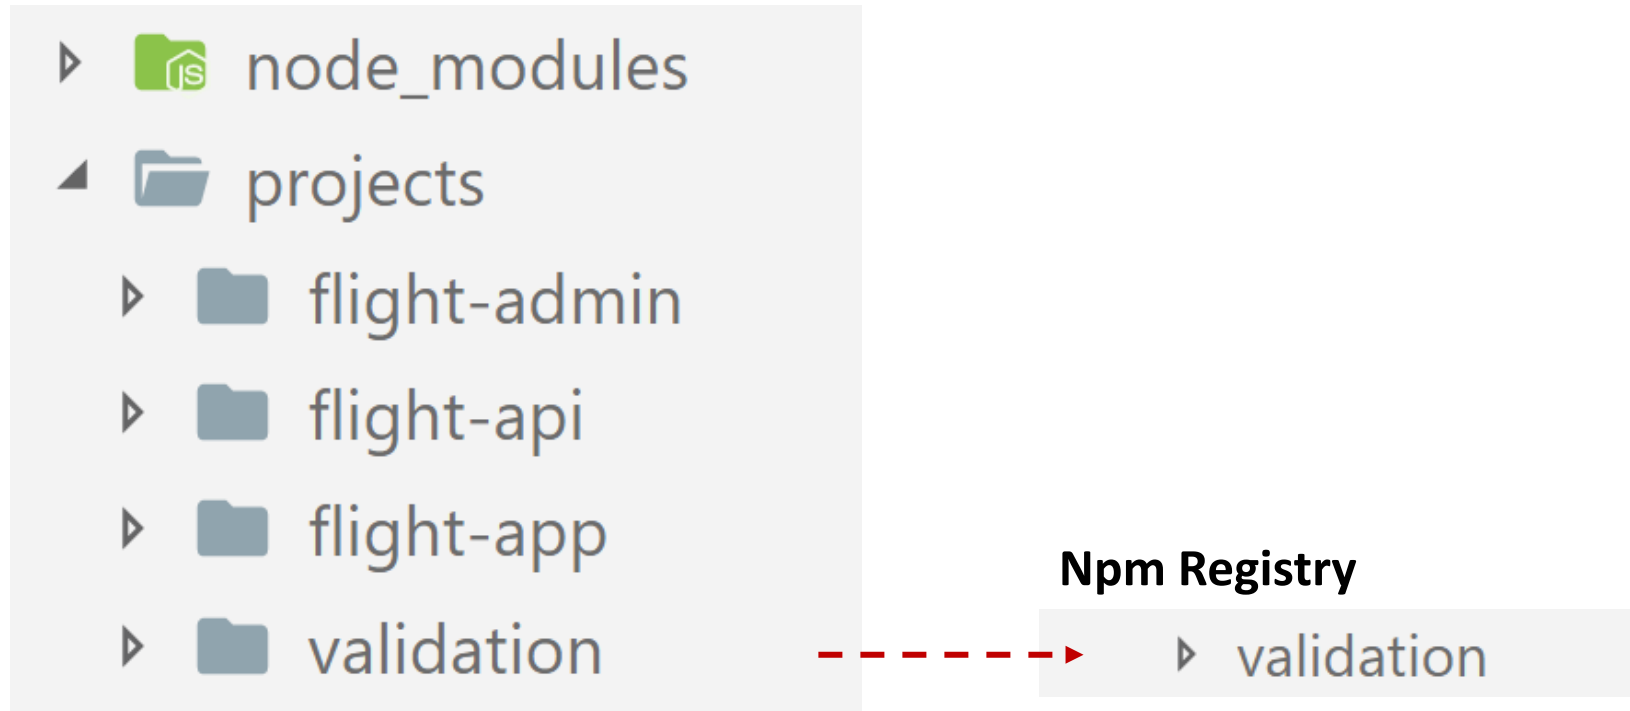

## Project Monorepo

- Like Workspaces/Solutions in different IDEs

## Company-wide Monorepo

- E. g. used at Google or Facebook

# Moving back and forth

# Tooling & Generator

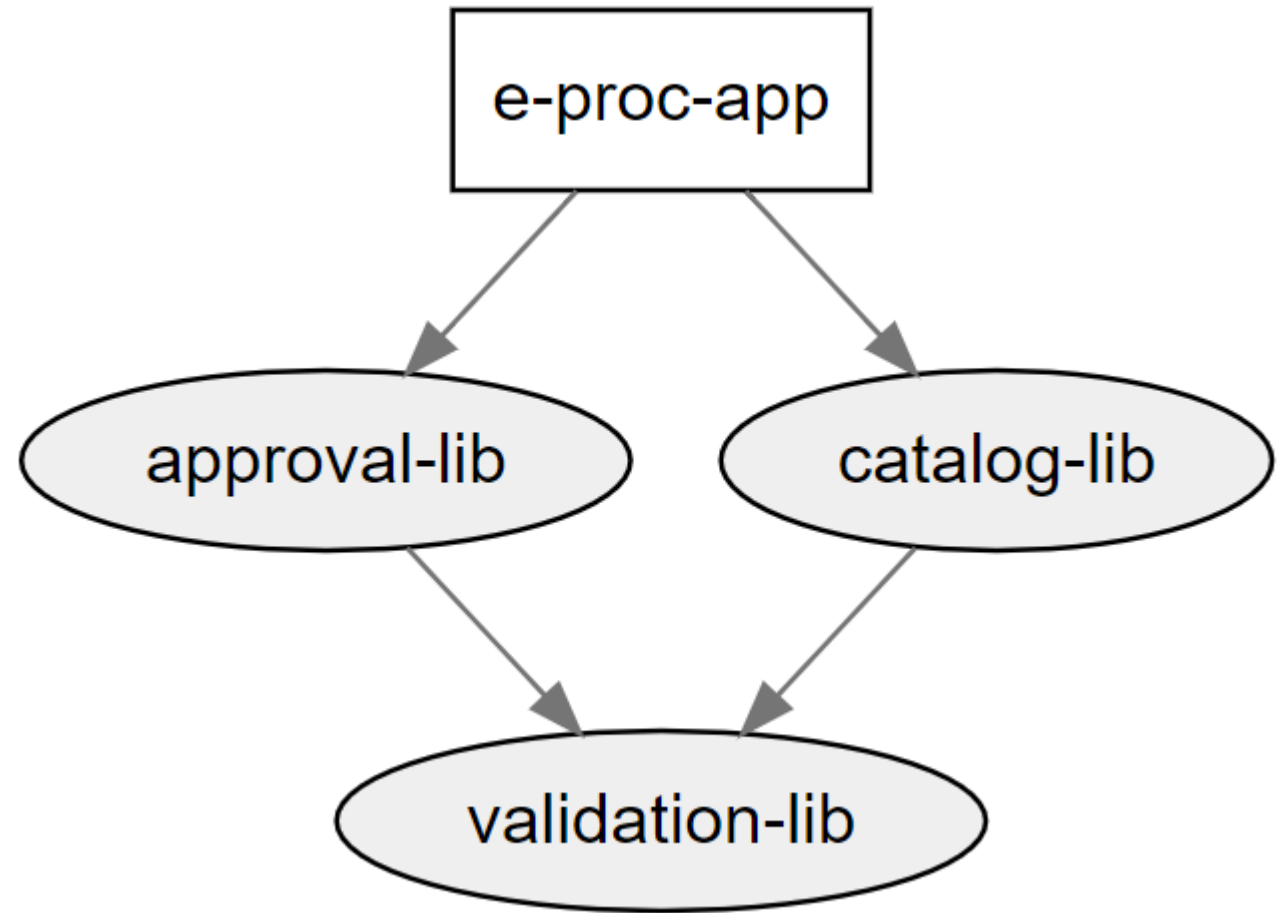

<https://nrwl.io/nx>

## **Nrwl Extensions for Angular**

An open source toolkit for enterprise Angular applications.

Module  
Structure

# Creating a Workspace

```
npm install -g @angular/cli
```

```
ng new workspace
```

```
cd workspace
```

```
ng generate app my-app
```

```
ng generate lib my-lib
```

```
ng serve --project my-app
```

```
ng build --project my-app
```

# Creating a Workspace

```
npm install -g @angular/cli
```

```
npm init nx-workspace workspace
```

```
cd workspace
```

```
ng generate app my-app
```

```
ng generate lib my-lib --buildable
```

```
ng serve --project my-app
```

```
ng build --project my-app
```

Domain-Driven

DESIGN

Tackling Complexity in the Heart of Software

Eric Evans

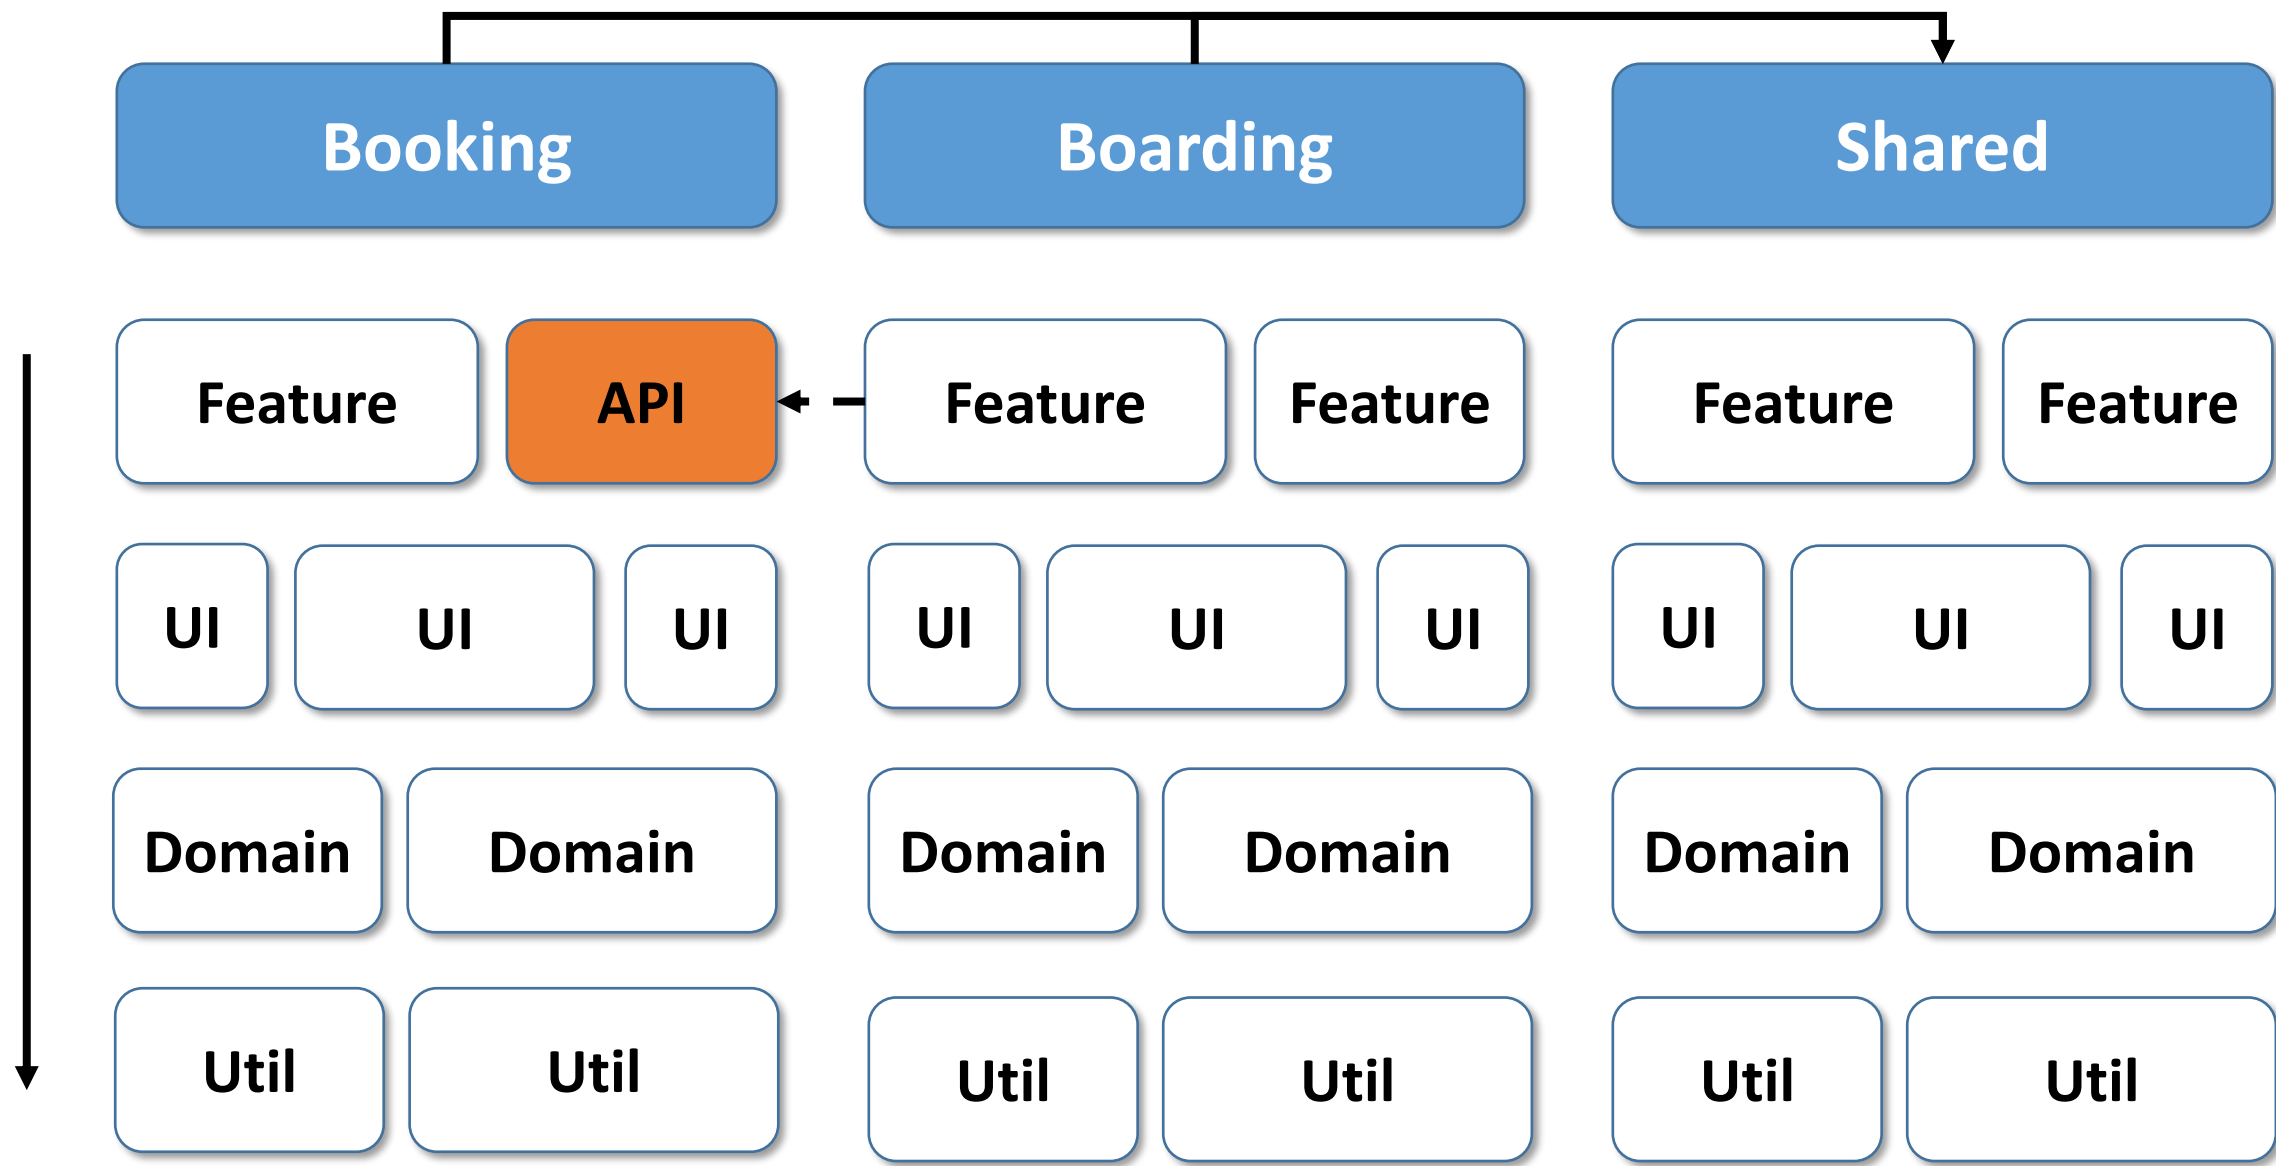

Foreword by Martin Fowler

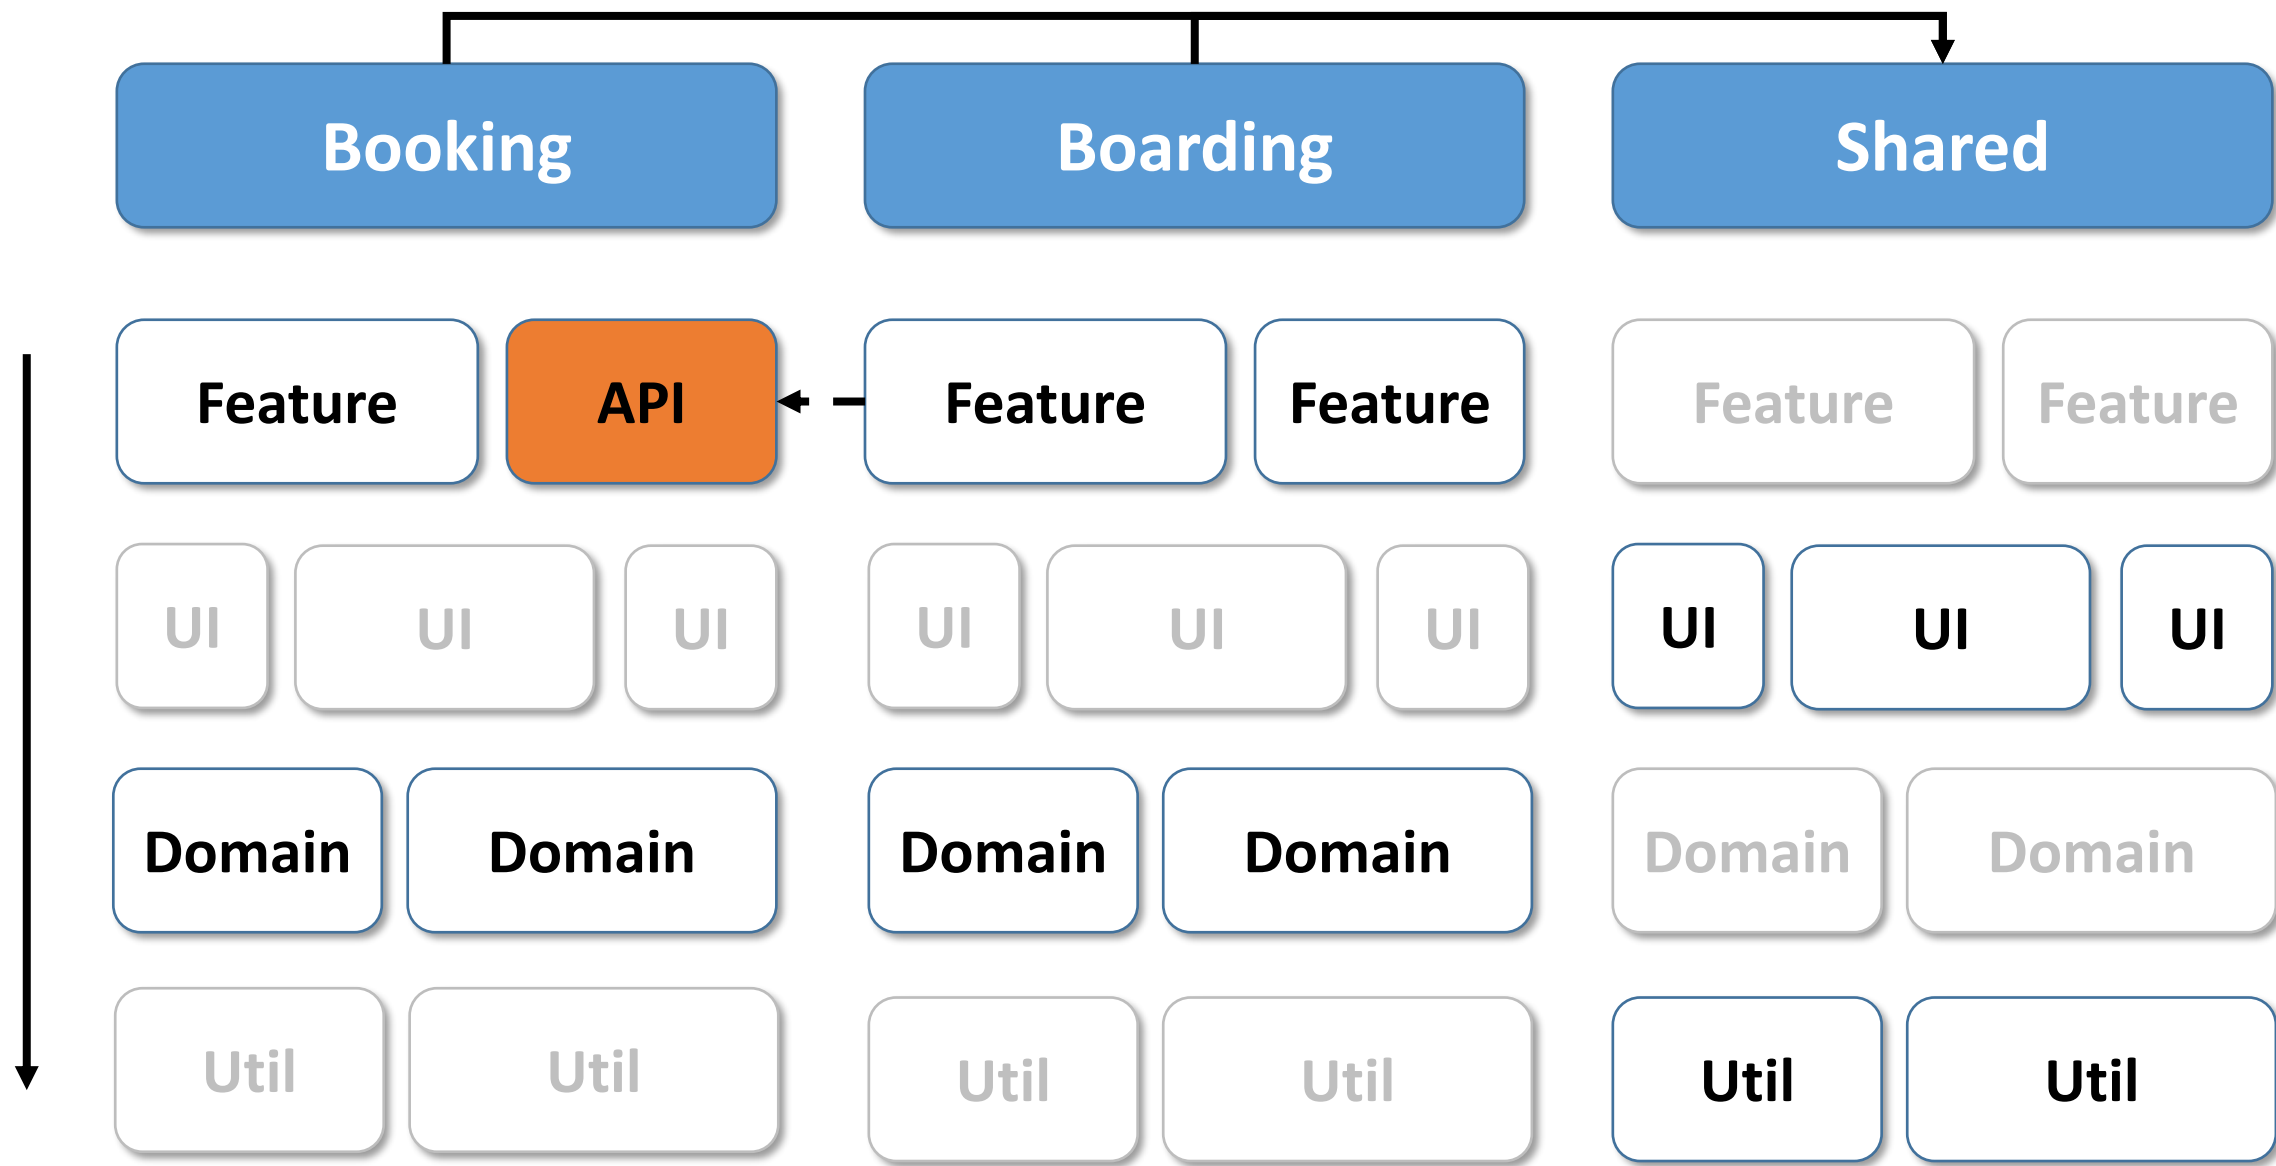

Lots of approaches  
for cross-domain  
communication and  
more ...

Smart  
Comp.

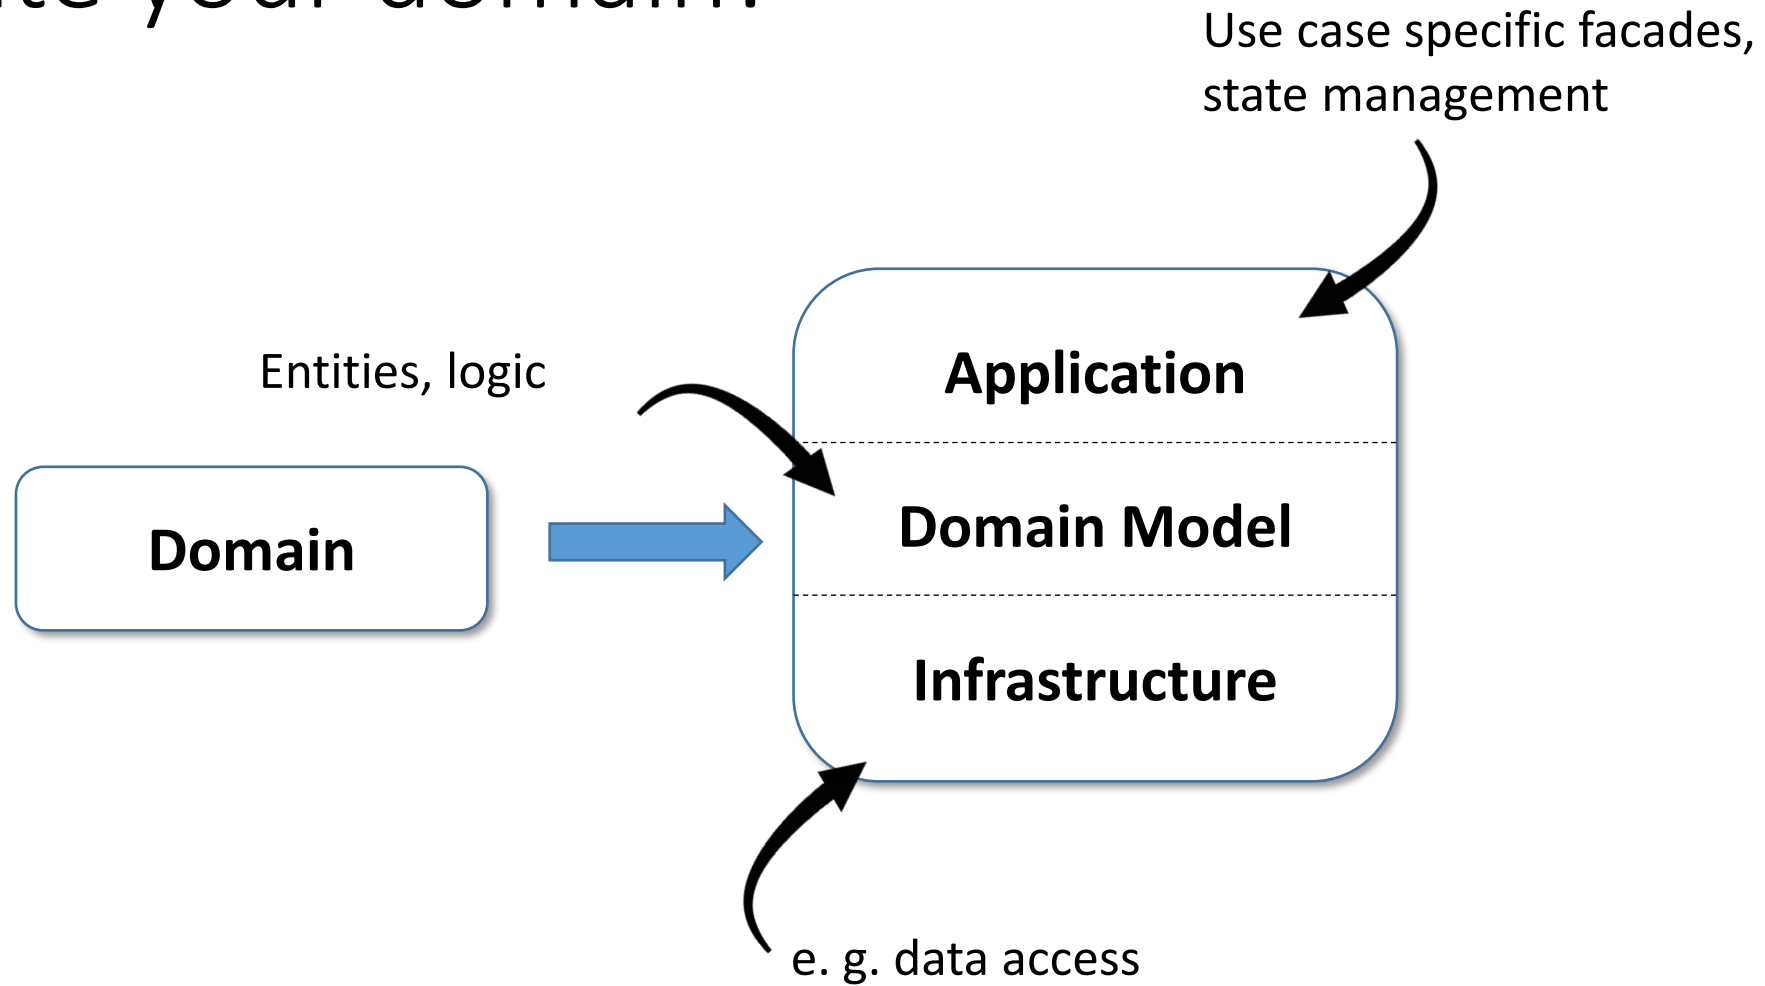

Dumb Comp.

# Isolate your domain!

Choice

Choice

Alternatives to  
layering

- e. g. Hexagonal Architecture, Clean Architecture
- Anyway: We need to **restrict access** b/w libraries

# DEMO

## Finegrained Libraries

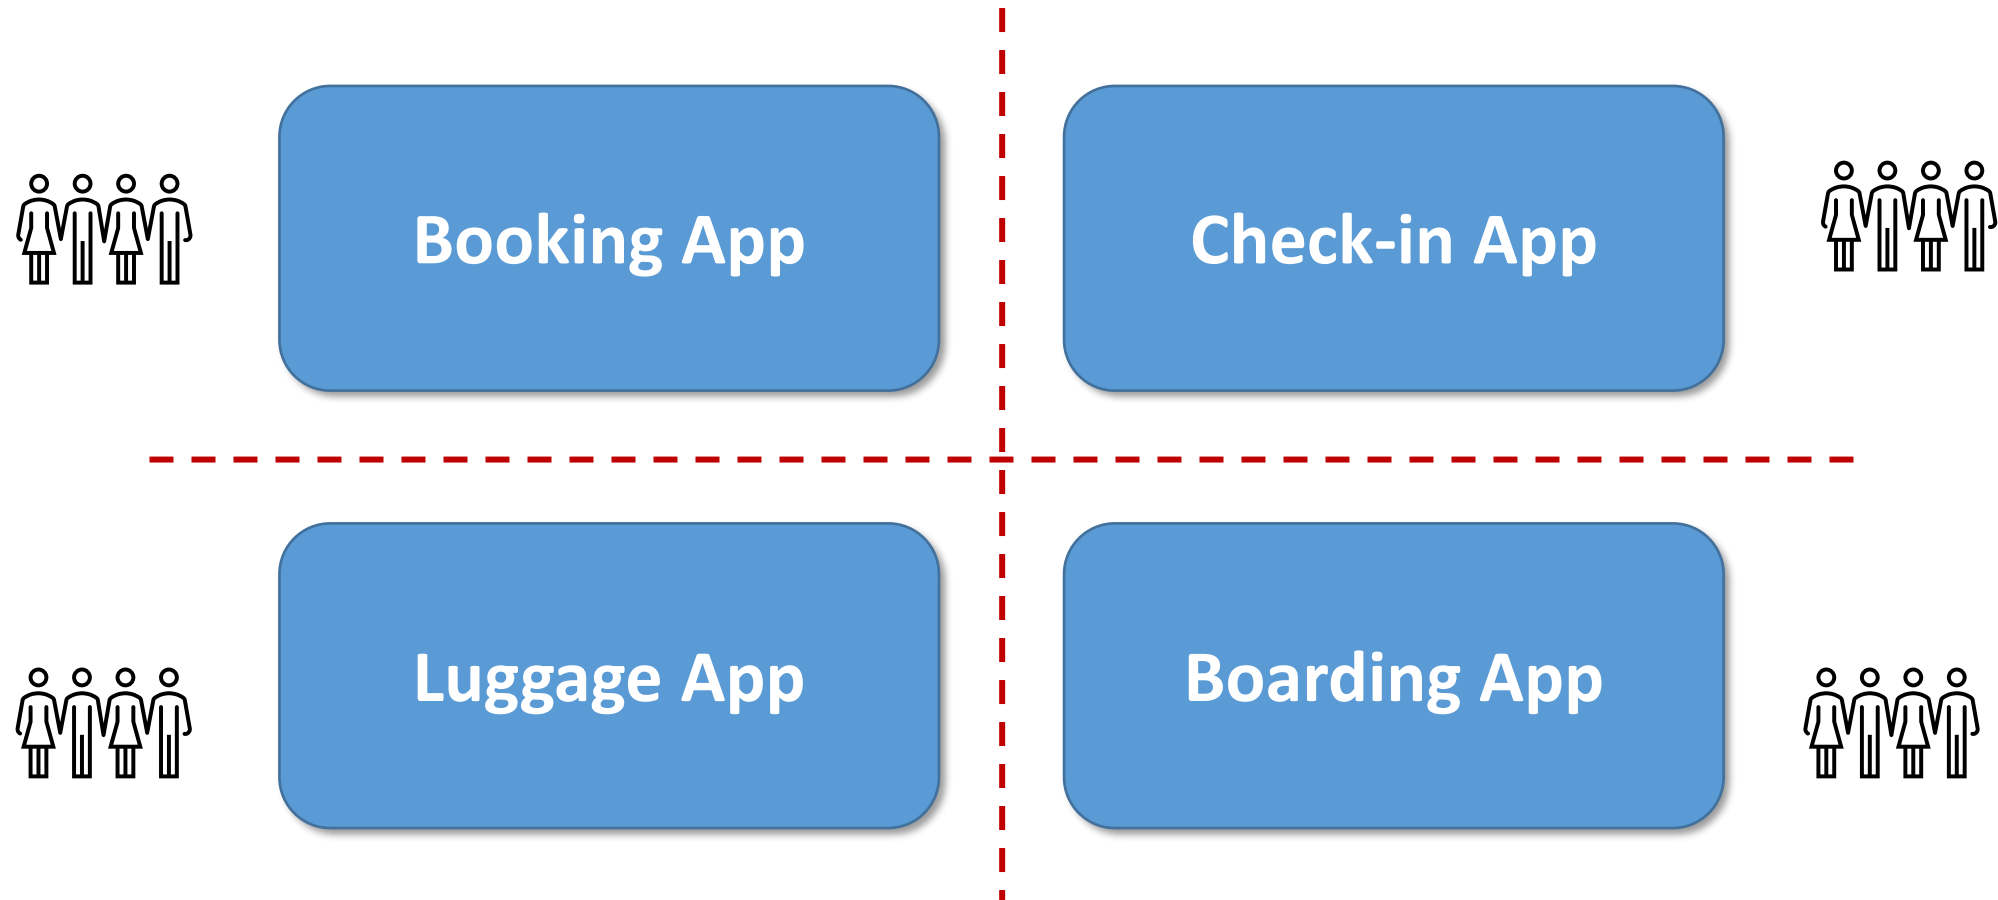

- Unit of recompilation
- Unit of retesting
- Access restrictions
- Information Hiding
- Easy: Just *ng g lib ...*
- Future replacement for NgModules?

# Micro Frontends?

Short outlook

# Microfrontends

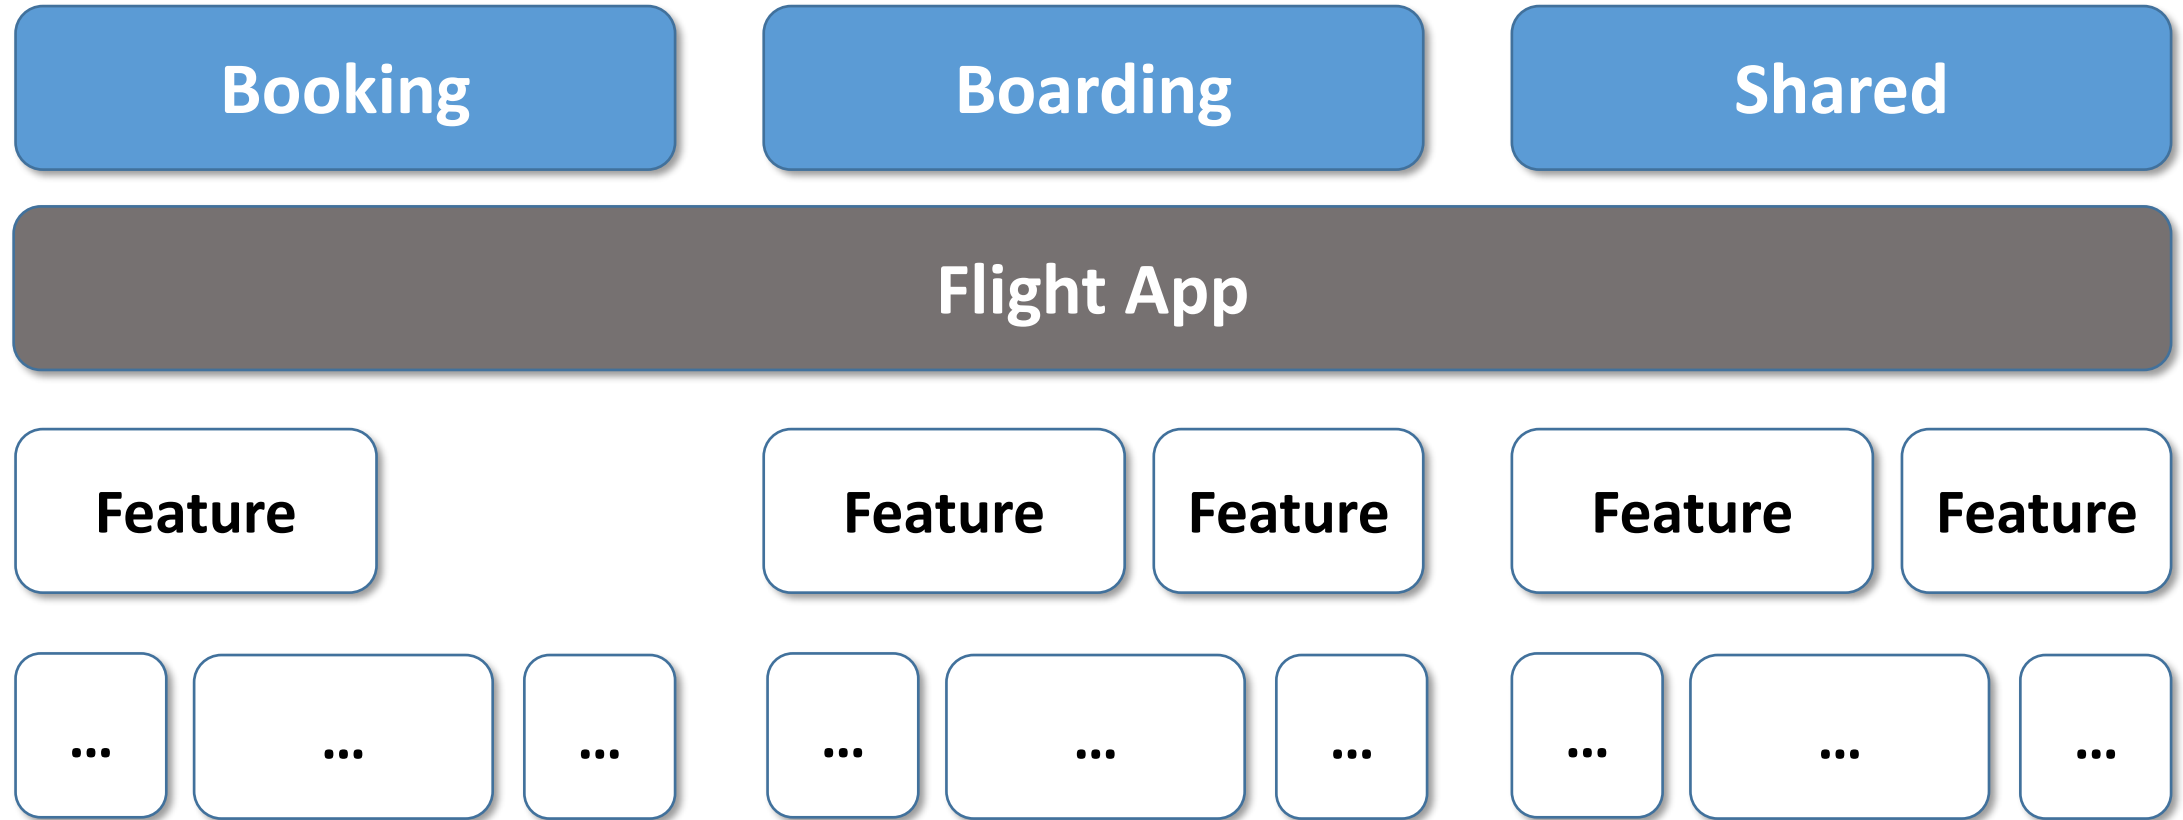

Microfrontends  
are first and foremost  
about **scaling teams!**

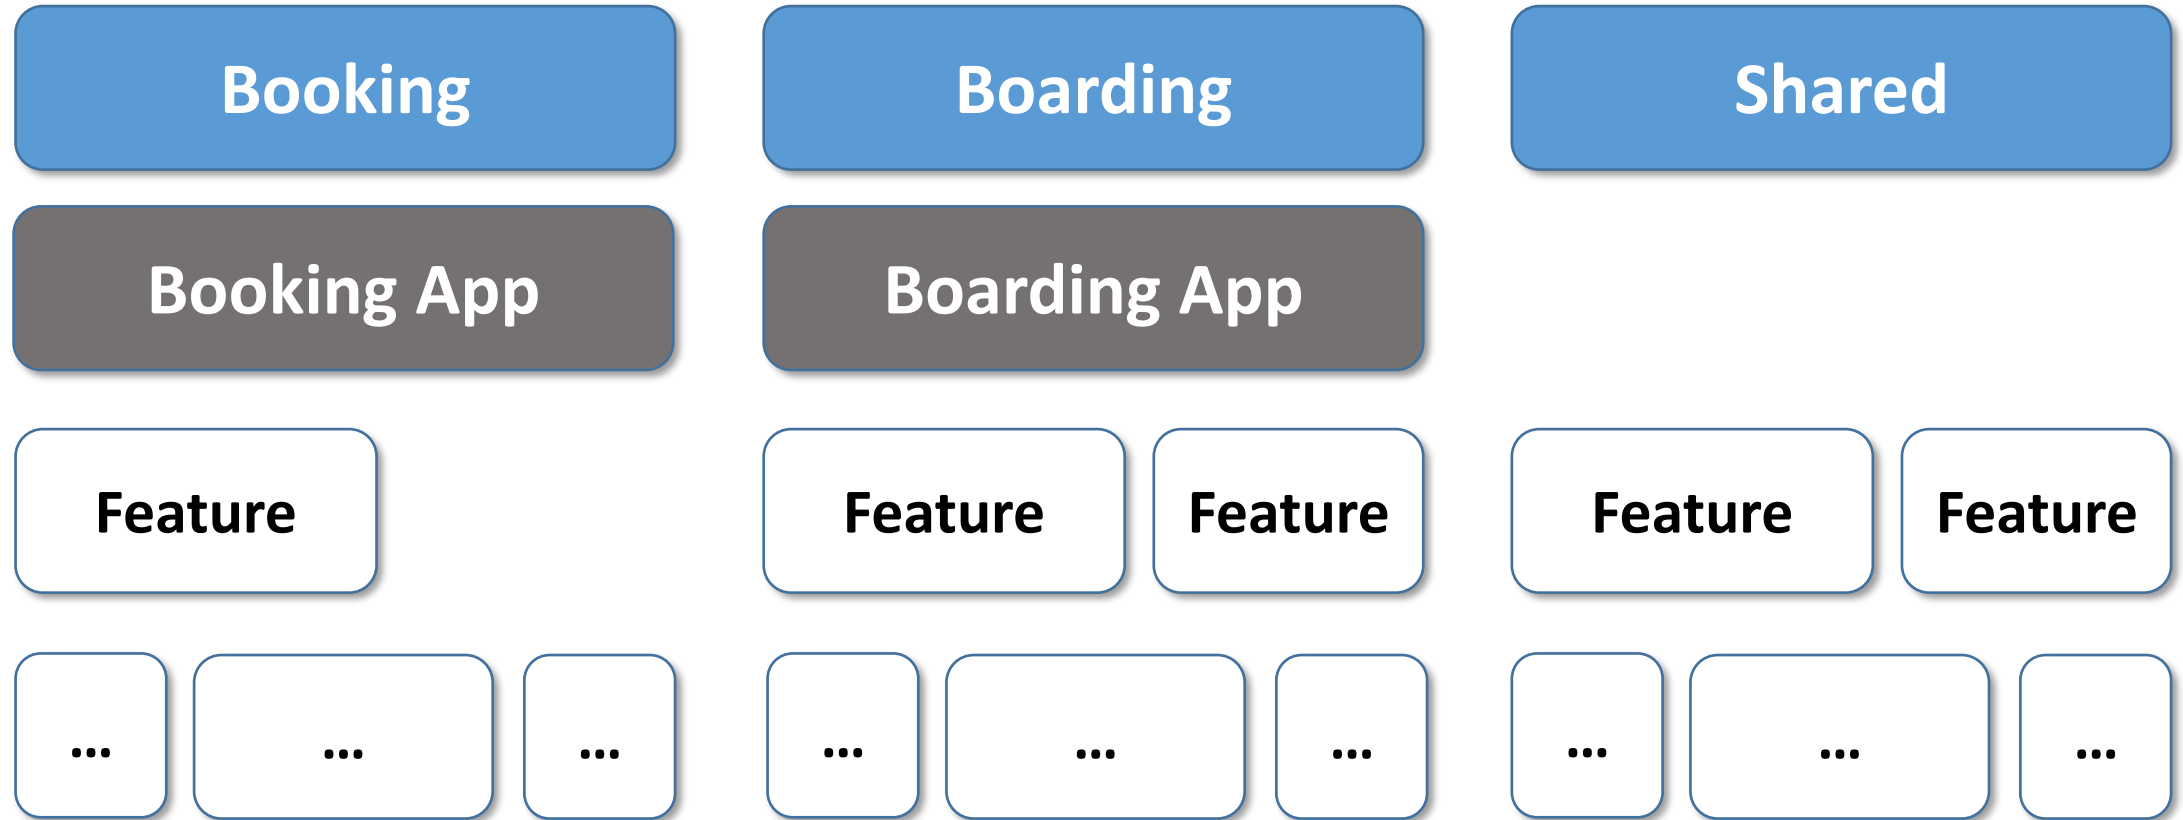

ANGULAR  
**ARCHITECTS**  
INSIDE KNOWLEDGE

# Deployment Monolith

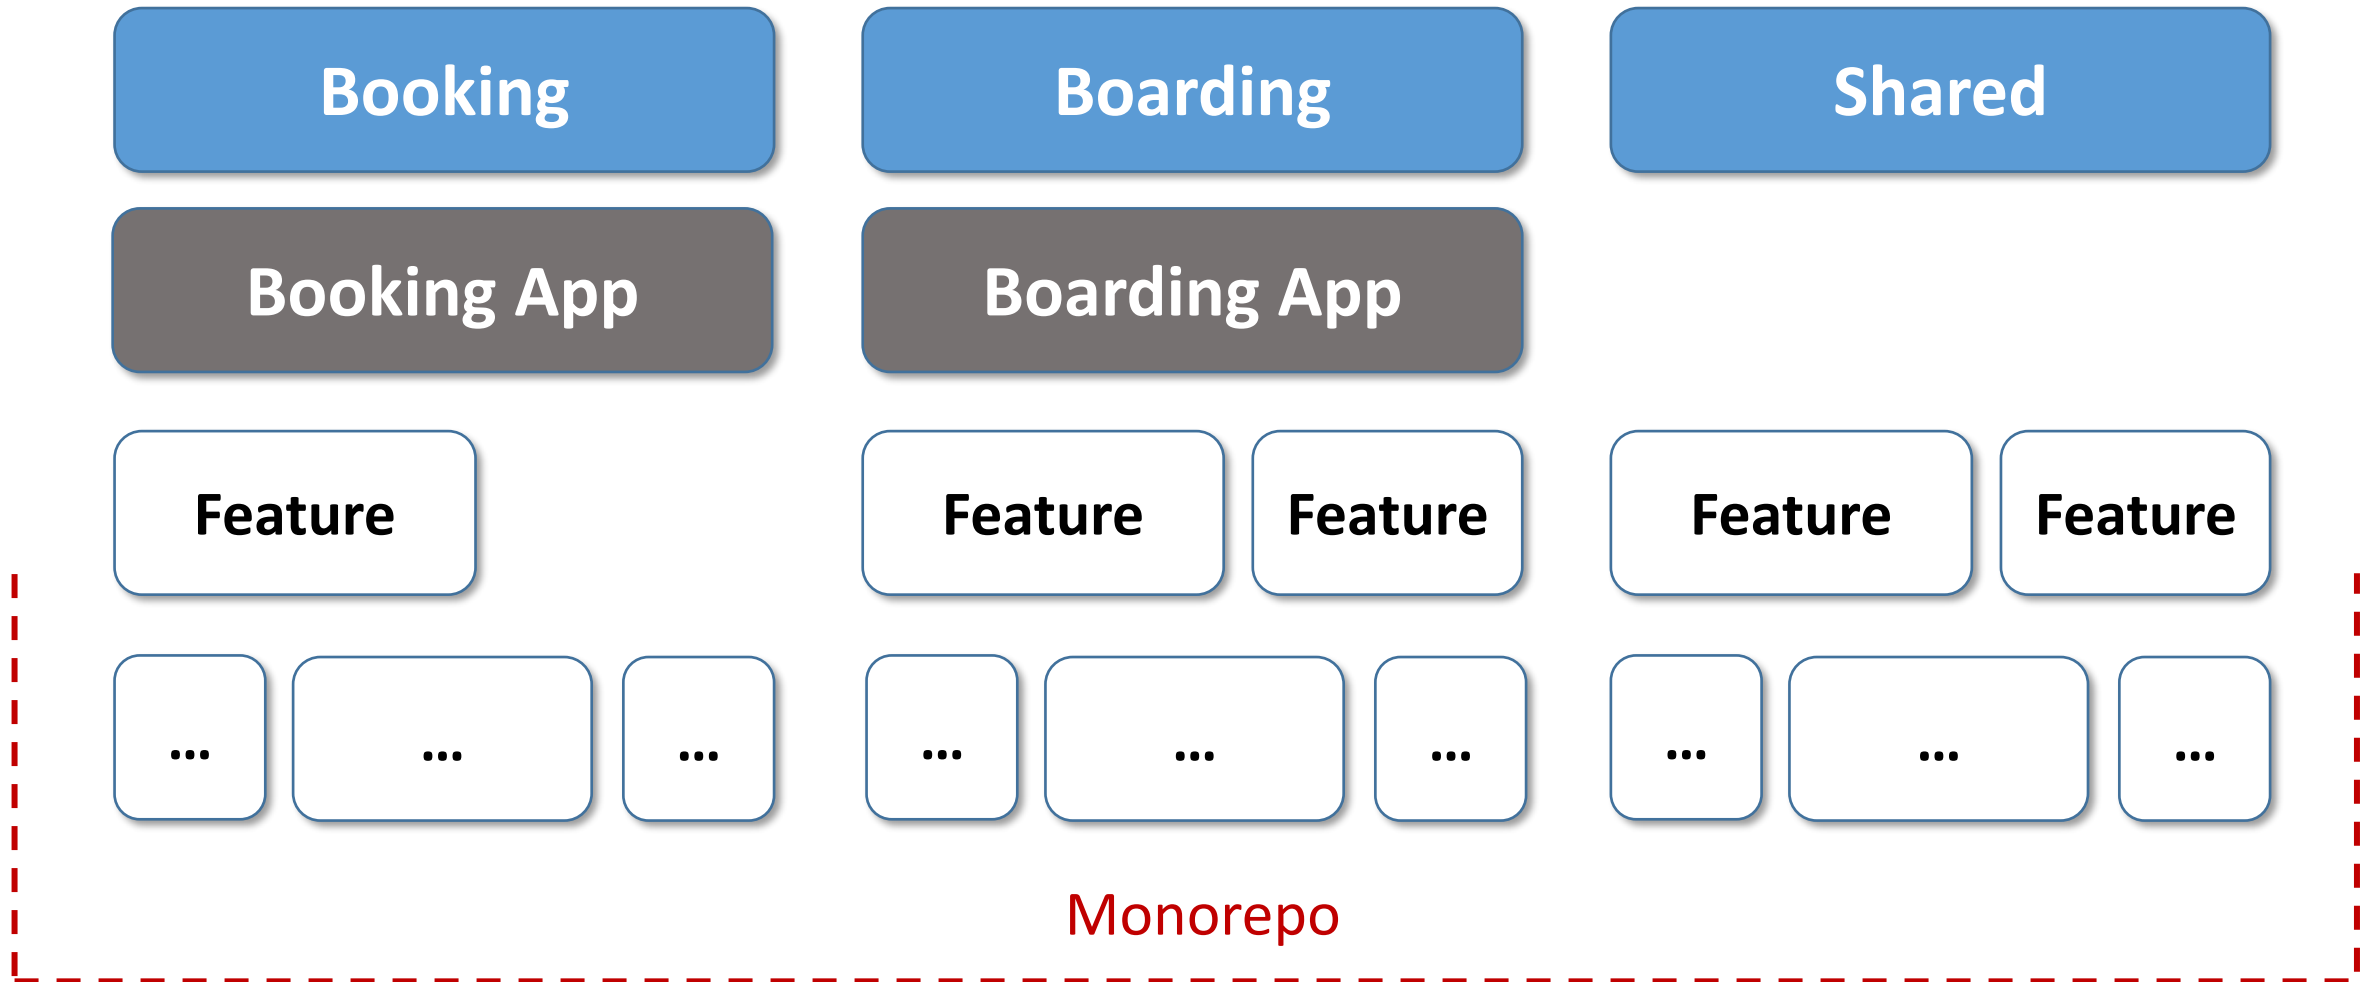

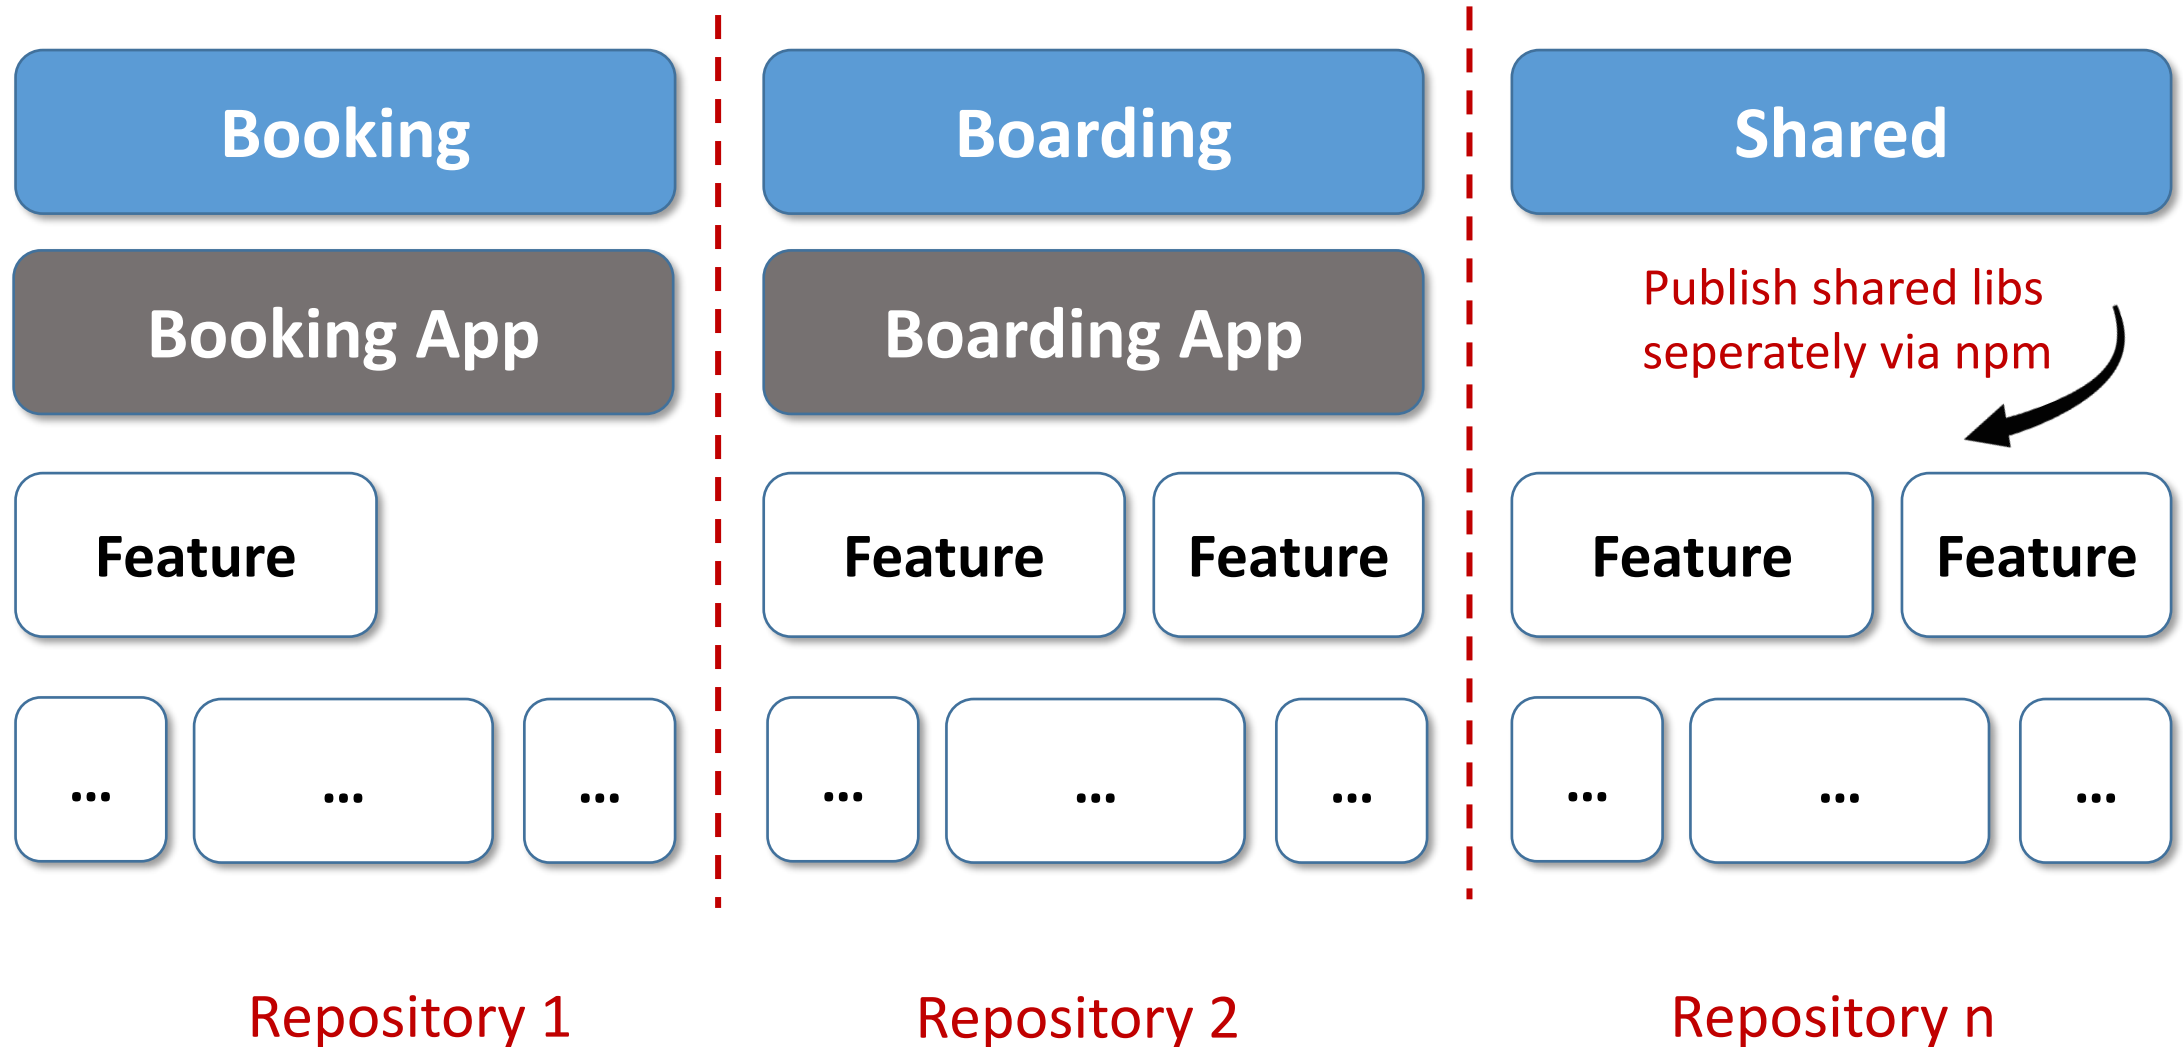

# Microfrontends

# Option 1: One App per Domain

# Option 2: One Monorepo per Domain

# Benefits

Autonomous Teams

Separate Development

Separate Deployment

Own architecture decisions

Own technology decisions

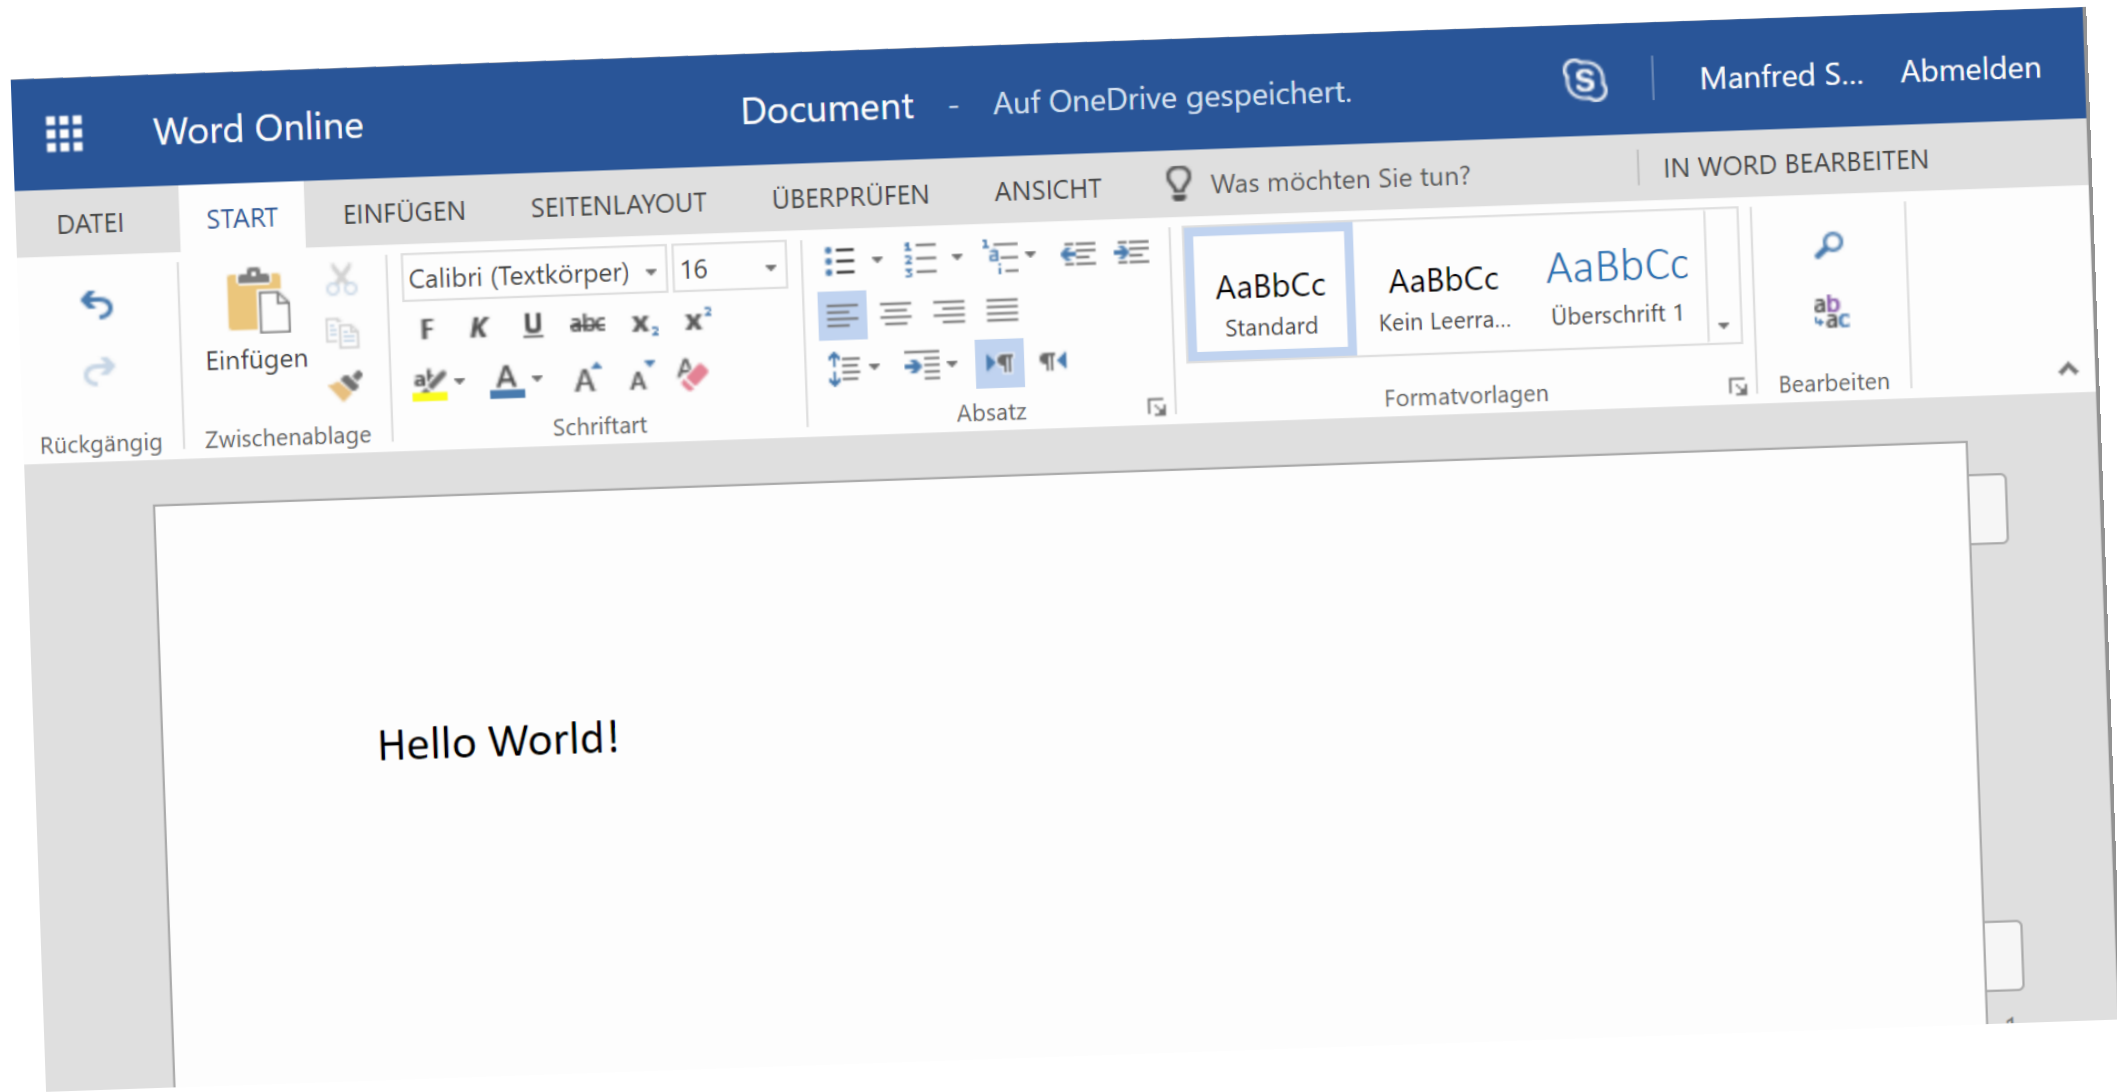

# Integration via Hyperlinks

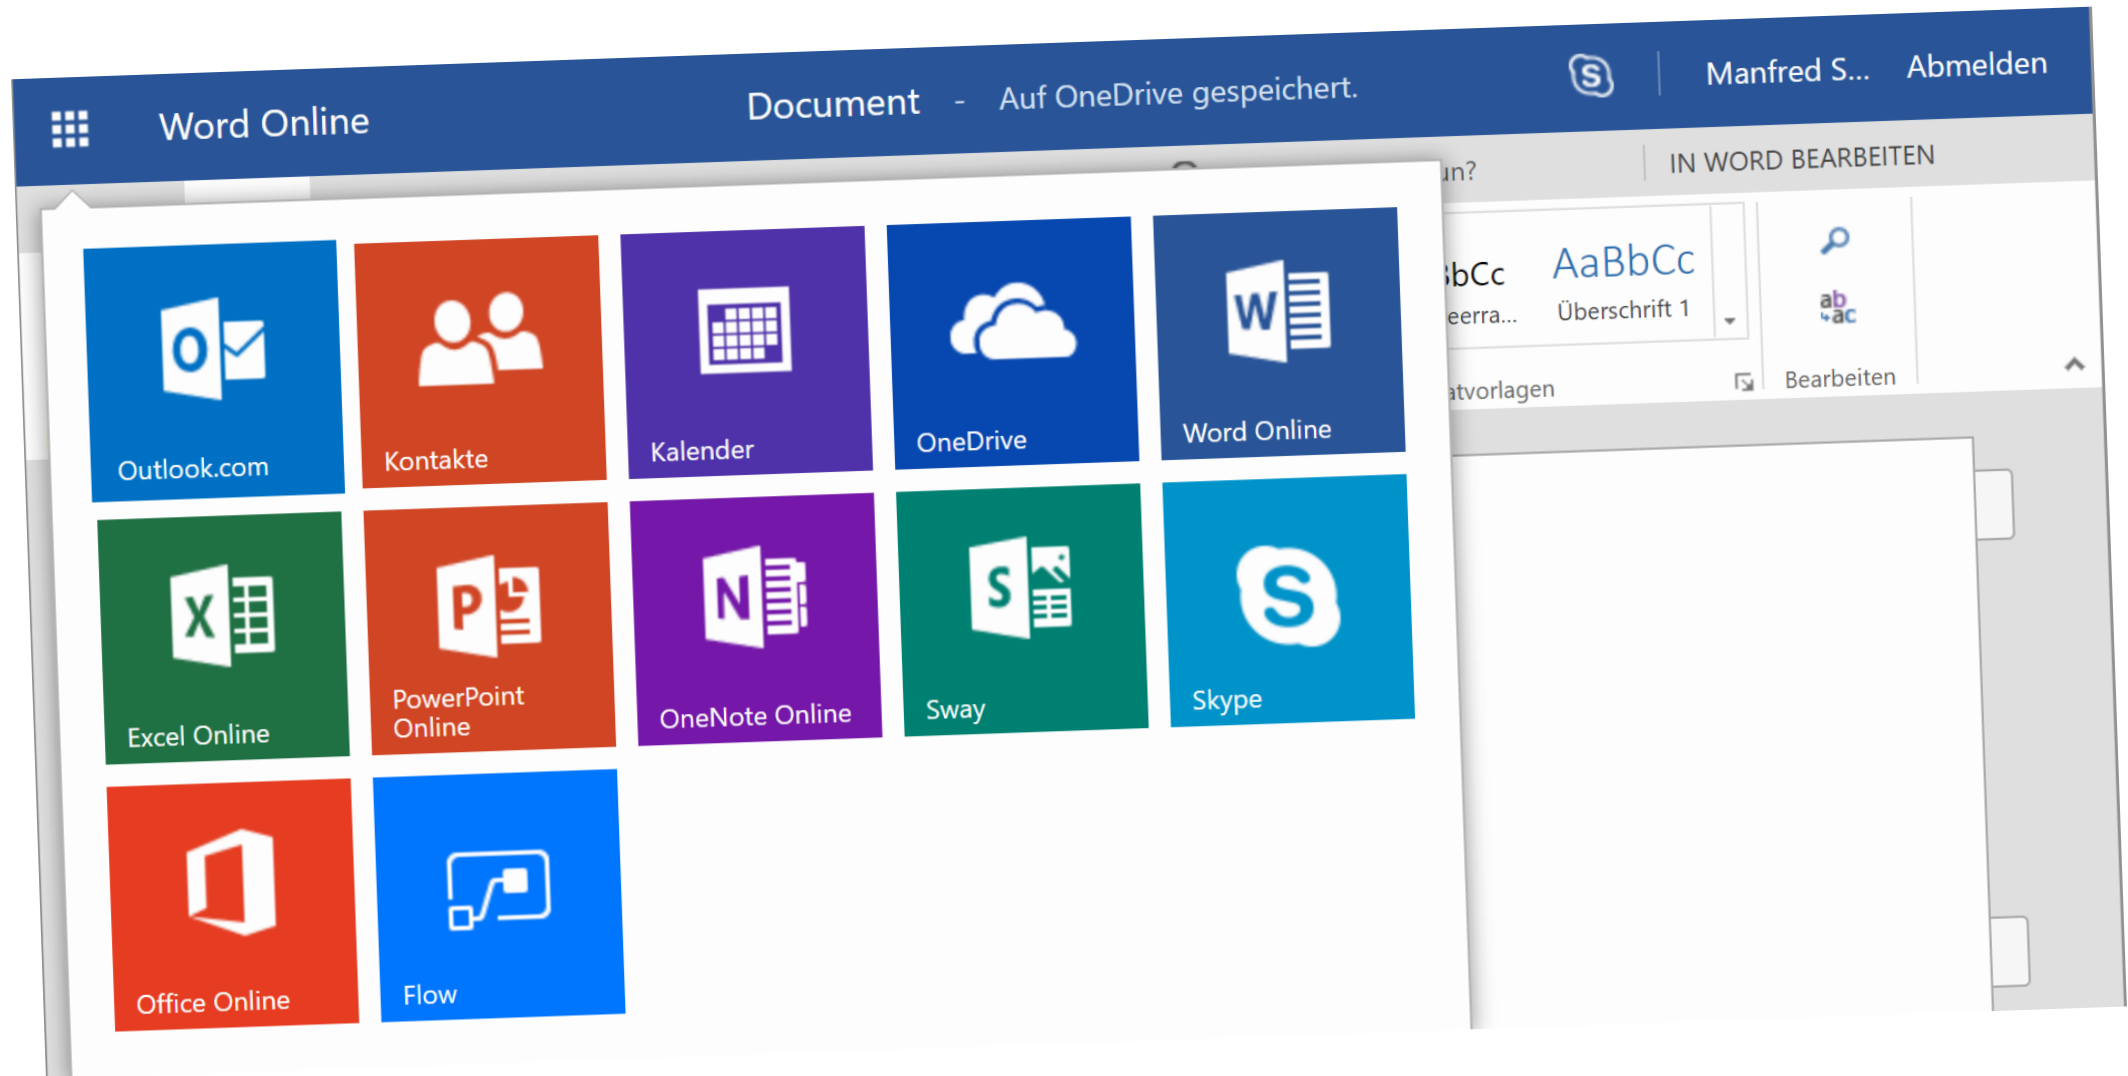

# UI Composition w/ Hyperlinks

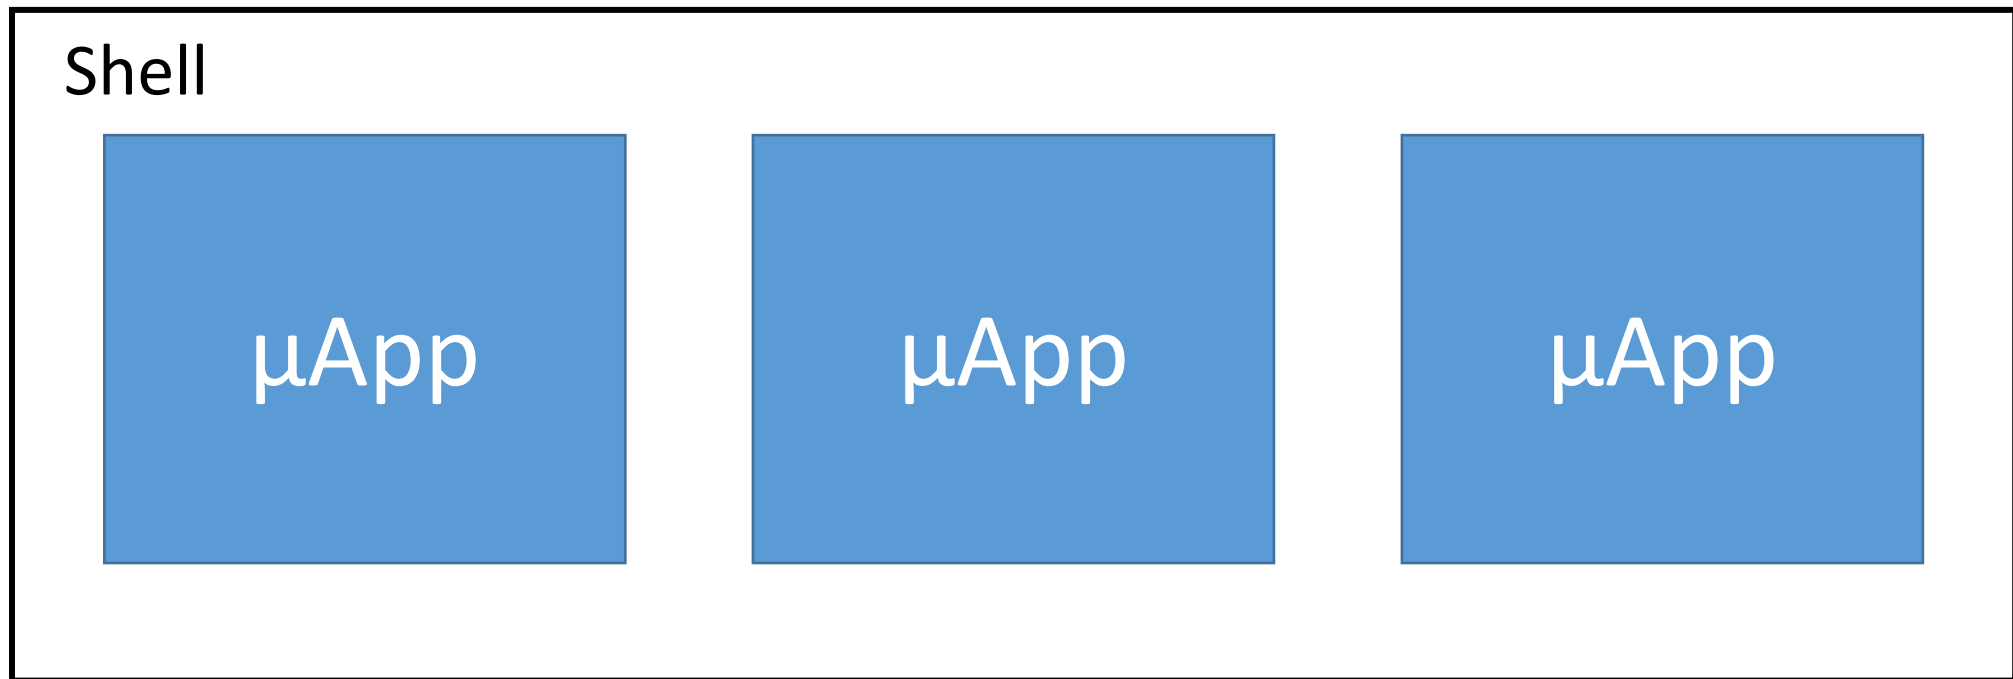

A large, light-colored, spiral seashell is positioned on a sandy beach. The shell is oriented vertically, showing its spiral structure. The background features a blurred view of the ocean with waves and a blue sky with white clouds. A semi-transparent white circle is overlaid on the right side of the shell, containing the text "Integration via Shell".

Integration via  
Shell

# Providing a (SPA based) Shell

# Webpack 5

## Module Federation

# Idea

Does not work with  
webpack/ Angular CLI

```
const Component = import('http://other-app/xyz')
```

Even lazy parts must be  
known at compile time!

# Webpack 5 Module Federation

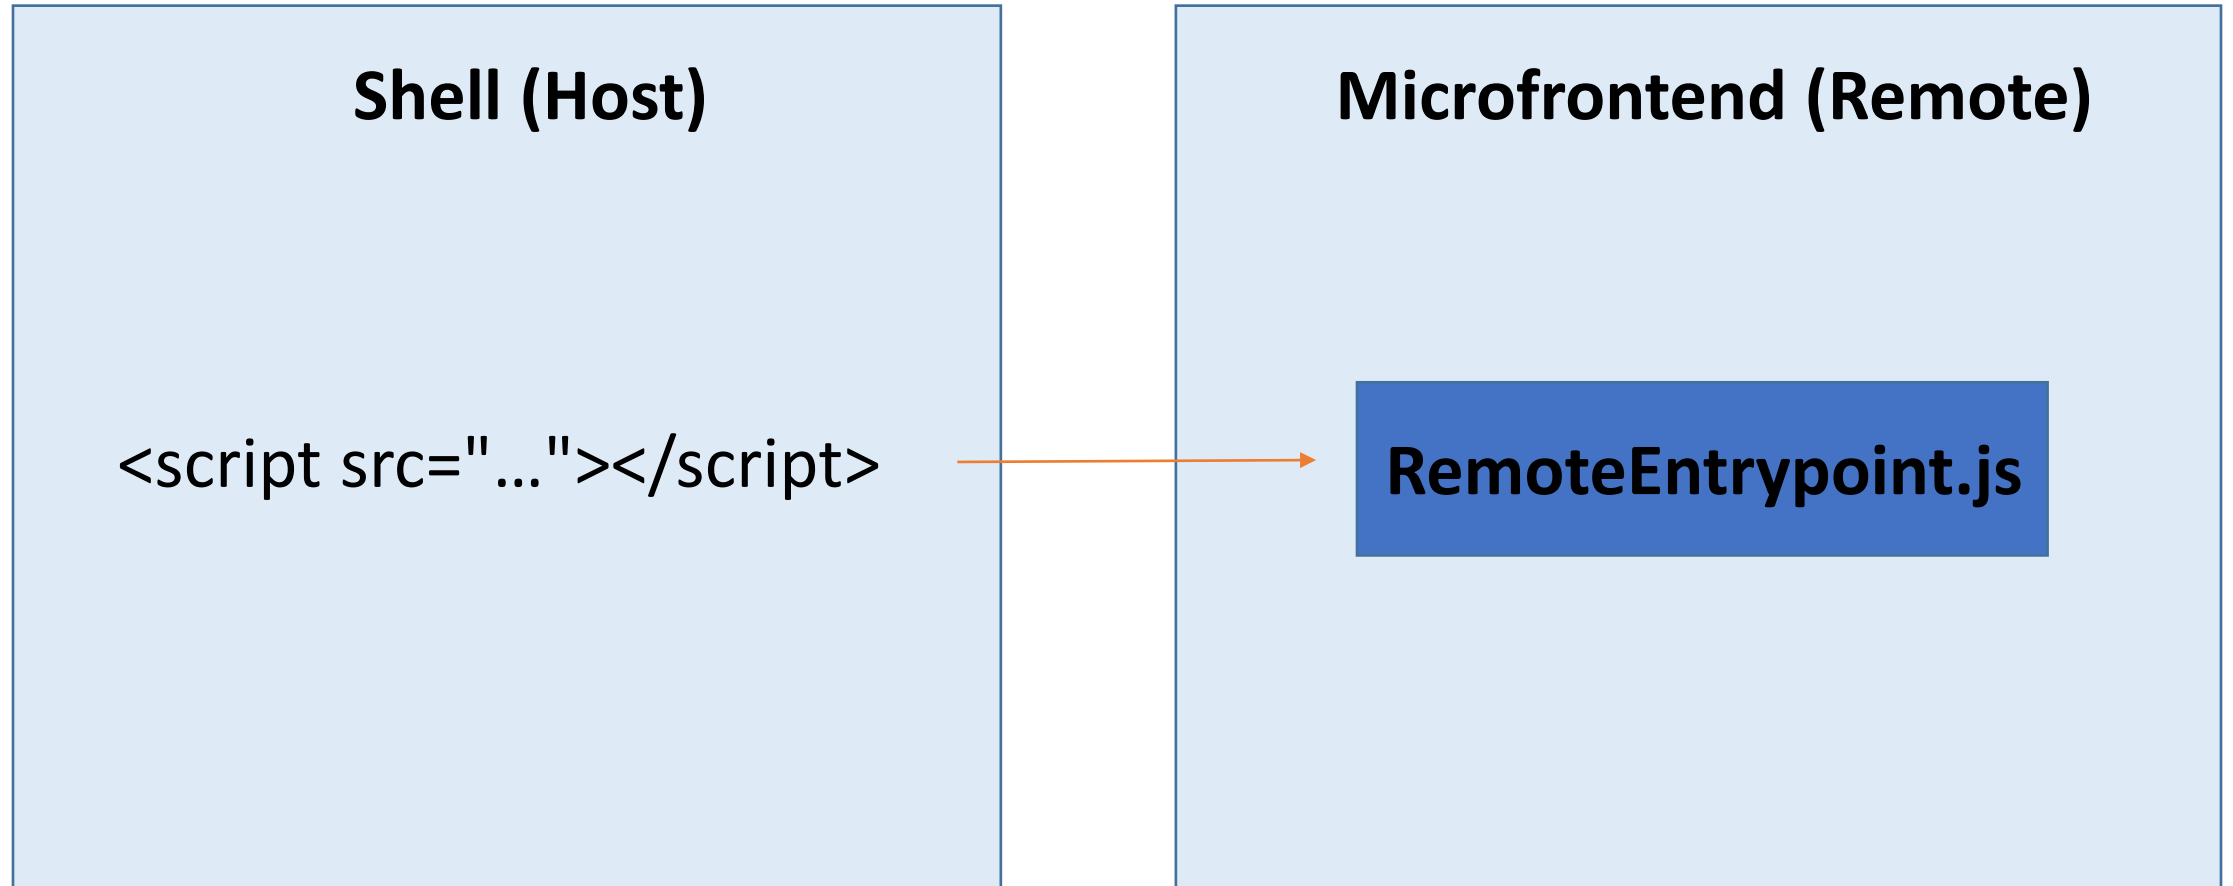

## Shell (Host)

```
import('mfe1/Cmp')  
  
// Maps Urls in  
// webpack config  
remotes: {  
  mfe1: "mfe1"  
}
```

## Microfrontend (Remote)

```
// Expose files in  
// webpack config  
exposes: {  
  Cmp: './my.cmp.ts'  
}
```

# How to Get the Microfrontend's URL?

# How to Share Libs?

## Shell (Host)

```
shared: [  
  "@angular/core", "..."  
]
```

## Microfrontend (Remote)

```
shared: [  
  "@angular/core", "..."  
]
```

# Dealing with Version Mismatches

ANGULAR  
**ARCHITECTS**  
INSIDE KNOWLEDGE

# Default Behavior

Selecting the highest compatible version

~~10.0~~

10.1

# Default Behavior

Conflict: No highest compatible version

11.0 ✓ 10.1 ✓

# Example

- Shell: my-lib: ^10.0
- MFE1: my-lib: ^10.1
- MFE2: my-lib: ^9.0
- MFE3: my-lib: ^9.1

## Result:

- Shell and MFE1 share ^10.1
- MFE2 and MFE3 share ^9.1

# Configuring Singletons

```
shared: {  
  "my-lib": {  
    singleton: true  
  }  
}
```

11.0 ✓

~~10.1~~

# Configuring Singletons

```
shared: {  
  "my-lib": {  
    singleton: true,  
    strictVersion: true // Error instead of warning!  
  }  
}
```

11.0 ✓ 10.1 ✗

# Relaxing Version Requirements

```
shared: {  
  "my-lib": {  
    requiredVersion: ">=1.0.1 <11.1.1"  
  }  
}
```

# Federated Angular: Angular, CLI, & Module Federation

Module Federation  
Configuration

@ManfredSteyer

# Custom Builder

# @angular-architects/module-federation

1.0.2 • Public • Published 18 hours ago

 [Readme](#)

 [Explore](#) BETA

 [3 Dependencies](#)

## Features

- ✓ Generates the skeleton for a Module Federation config.
- ✓ Installs a custom builder to enable Module Federation.
- ✓ Assigning a new port to serve ( `ng serve` ) several projects at once.

# Usage

- 1) `ng add @angular-architects/module-federation`
- 2) Adjust generated configuration
- 3) `ng serve`

# DEMO

**ARCHITECTS**  
INSIDE KNOWLEDGE

# Multi Framework/ Version Solutions

ANGULAR  
**ARCHITECTS**  
INSIDE KNOWLEDGE

# Module Federation

```
const Component = await import('other-app/cmp');
```

# Module Federation

```
const main = await import('other-app/main');  
  
main.bootstrap();
```

# Module Federation

```
const rootElm = document.createElement('app-root')  
document.body.appendChild(rootElm);
```

```
const main = await import('other-app/main');
```

```
main.bootstrap();
```

# Module Federation

```
const rootElm = document.createElement('app-root')  
document.body.appendChild(rootElm);
```

```
await import('other-app/main'); // Self-Bootstrapping
```

# Routing to Another SPA?

## WrapperComponent

```
const rootElm = document.createElement('app-root')  
document.body.appendChild(rootElm);  
  
await import('other-app/main');
```

# Challenges

- Bundle Size
- Multiple Routers
- Bootstrapping Several Angular Instances
  - Share Platform-Object when same version is reused
  - Share ngZone
